College Name	AVS College of Technology

The screenshot shows an IDE window with a Python file named `app.py`. The code is a Flask application that serves a template named `Chatbot.html`. The code is as follows:

```
1 from flask import Flask, render_template
2
3 app = Flask(__name__)
4
5 @app.route('/Chatbot', methods = ['GET', 'POST'])
6
7 def Chatbot():
8     return render_template('Chatbot.html')
9
10 if __name__ == '__main__':
11     app.run()
```

The Run console at the bottom shows the command used to run the application: `C:\Users\hp\AppData\Local\Programs\Python\Python310\python.exe C:\Users\hp\AppData\Local\Temp\Temp1_Chatbot.zip\#fñü\app.py`. The output indicates that the Flask app is serving, debug mode is off, and it is running on `http://127.0.0.1:5000`. A warning message states: "WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead." The status bar at the bottom shows the file encoding as UTF-8, 4 spaces, and Python 3.10.
